

Coal, petroleum, minerals, electricity, gas and renewable energy

Coal, petroleum, minerals, electricity, gas and renewable energy

ACIL Tasman has substantial experience in providing advice on energy and resources to industry and governments in Australia and internationally.

We understand the importance of these resources and associated infrastructure to economic growth and prosperity, and the role of government resources policy.

Our knowledge and experience has been gained in the course of analysing resource policy issues and resource projects in Australia and overseas since the 1980s. Projects have covered:

- project evaluation
- industry structure analysis
- market analysis
- public policy assessment
- regulation
- impact assesment

In resources, ACIL Tasman has advised on development of LNG projects, iron ore mining, processing precincts, support industries and infrastructure. We have undertaken numerous regional development and infrastructure needs assessments, project impact studies and workforce needs analyses.

ACIL Tasman's strength in electricity industry consulting is reinforced by PowerMark, a market analysis model simulating price formulation in the electricity market.

PowerMark is at the cutting edge in simulating market behaviour, including the exercise of market power.

ACIL Tasman's gas industry consultancy is backed by GasMark Global, a unique market analysis and simulation model with a comprehensive market and distribution database. The GasMark model underpins much of our commissioned gas market analysis for clients, as well as our widely-used Gas Market Review and Outlook multi-client report.

Contact ACIL Tasman to confirm the contribution we can make to your projects in the energy and resources sectors.

See our energy resource case studies.
