

Infrastructure projects, programs, pricing and policy

Infrastructure projects, programs, pricing and policy

ACIL Tasman consulting provides advice on a range of economic policy issues relating to infrastructure.

Our capabilities include public policy economics, economics of regulation and competition, cost benefit analysis, econometrics, economic impact analysis (including computable general equilibrium modelling), spatial analysis, real options analysis and sector-specific market models e.g. electricity and gas market models and transport market models.

See our infrastructure case studies.

Contact ACIL Tasman for more information about infrastructure programs, pricing and policy case studies.
