

Road transport studies: project evaluation, regulation and fuel

Road transport studies: project evaluation, regulation and fuel

Our road transport consultants have extensive experience examining the road transport sector for a range of public and private sector organisations.

Our road development and road transport work has covered areas of:

- governance and commercial arrangements for toll roads
- project evaluation, cost benefit and financial return assessments on road investment
- laws and regulations: uniform road transport laws, regulatory and compliance systems for heavy vehicles
- externalities: external costs of different transport modes, the economic costs and safety externalities of road crashes, market distortions and the regulation of motor vehicle emissions
- road pricing: road user charges and taxation options
- fuel studies, vehicle emissions and fuel specifications
- commercial advice on sustainable freight rates the finances of the trucking industry.

A specific selection of our road-related projects include some undertaken in relation to:

- toll roads
- freight rates and the safety performance of road transport operators
- road and rail infrastructure pricing
- heavy vehicle standards
- road freight forecasts
- fuel taxation and the costs of road transport
- truck freight rates and owner-driver ROI
- options for regulation of the road freight industry regulation
- competitive neutrality and freight rates for road and rail
- strategic transport needs assessment
- road user charges for the NZ Government.
