

Wastewater and water treatment for water reuse and recycling

Wastewater and water treatment for water re-use and recycling

Our wastewater consultants excel in the economic and financial evaluation of projects involving wastewater, water re-use, recycling and sewerage.

For many projects, the impacts extend beyond the direct financial effects on service providers and users. As a result, we have developed expertise in the valuation of human and property damage in a risk framework, and willingness to pay analysis.

In the wastewater sector, ACIL Tasman has undertaken cost benefit analysis as well as assessments of willingness to pay and the application of contingent valuation techniques. The projects have covered issues such as:

- wastewater and water reuse
- upgrade treatment options
- water recycling strategies
- economic and financial wastewater project evaluation
- potential for re-use of treated effluent
- pricing for recycled water
- research into access to recycled water and impediments to investment
- water recycling schemes

See our wastewater and water recycling case studies.
